

**HORIZON  
SOLUTIONS**

— Safety Case Study —  
Growing National Car Wash Chain

## Preparing for A Safer Future

### Client:

A growing car wash chain that serves customers across the United States and is slated to open more locations.

### Opportunity:

Although **safety was their number one concern**, an arc flash incident resulted in one location being shut down and an employee sent to the hospital.

### Solution:

Horizon Solutions® took immediate action:

- Went on-site immediately and performed a facility assessment
- Worked with a local electrical inspector
- Worked with Eaton to evaluate the client's Motor Control Center (MCC) and perform an arc flash safety service
- Provided expertise to get their facility back up and running, including providing information to prevent OSHA violations
- Hosted an arc flash training for all of their technicians to prevent future incidents
- Currently working with Eaton's Bussmann Division to create an online standardized training nationwide for all of the client's locations through digital remote access

### Benefits:

By making an investment in training their workforce, the client is saving tens of thousands of dollars in possible future OSHA fines. Additionally, prioritizing safety and education is priceless.

*"Horizon Solutions has been a great asset to our company. They assisted in expediting our safety and compliance process to ensure we were aligned with OSHA. Utilizing their local training facility in Rochester has been a huge benefit to the team, including safety and arc flash. Experiencing what I have now, I recommend all parties conduct an arc flash assessment and save a life."*
